                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   INTERACTION WITH THE MAJOR VAULT PROTEIN.
NUCLEAR LOCALIZATION SIGNAL 1ST PART
"The nuclear protein PH5P of the inter-alpha-inhibitor superfamily: a
           missing link between poly(ADP-ribose)polymerase and the inter-alpha-inhibitor family and a novel actor of DNA repair?"; FEBS Lett. 446:6-8(1999).
-!- CATALYTIC ASTIVITY: NAD(+) + {ADP-D-ribosyl}(N)-acceptor = nicotinamide + {ADP-D-ribosyl}(N+1)-acceptor.
-!- SUBUNIT: BINDS TO THE MAJOR VAULT PROTEIN (MPV). THE VAULT, A LARGE RIBONUCLEOPROTEIN COMPLEX, CONTAINS THE 100-kDA MPV AND
                                                                                                          PROTEINS OF 193 AND 240 KDA.

-1 SUBCELLULAR LOCATION: CYTOPLASMIC, BUT IS ALSO FOUND IN THE NUCLEUS, ASSOCIATED WITH MITOTIC SPINDLES.

-1 TISSUE SPECIFICITY: WIDELY EXPRESSED: THE HIGHEST LEVELS ARE THE KIDNEY; ALSO DETECTED IN HEART, PLACENTA, LUNG, LIVER, SKELETAL MUSCLE, SPLEEN, LEUKCYTES AND PANCREAS.
-1 SIMILARITY: BOLONGS TO THE PRAPP FAMILY.
-1 SIMILARITY: CONTAINS 1 BRCT DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (POTENTIAL).
NUCLEAR LOCALIZATION SIGNAL 2ND PART
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NAD-BINDING (BY SIMILARITY).
